## Measurement Solutions for Refrigeration Technology

# The benefits of electronic refrigeration system analyzers

## The new analyzers from Testo

Testo is again setting standards in refrigeration technology with the new refrigeration system analyzers for measuring, recording, regulating and analyzing refrigeration systems and heat pumps.

What began with accurate and practical pressure and flow velocity measuring instruments and electronic manifolds for the refrigeration trade, now finds its technological continuation in the new refrigeration system analyzers testo 560, 556 and 530.

The high-quality analyzers form a unit composed of highly accurate sensors for measuring pressure, vacuum, temperature (up to 4 temperatures simultaneously), current consumption, oil pressure and refrigerant filling quantities. The instruments have a 4-way valve block with stowable valve knobs (testo 556 and testo 560). The large, backlit display digitally shows the pressure and the condensation and evaporation temperatures. There are 30 refrigerant curves stored in the instrument, which can be updated free of charge via internet and software (testo 556 and testo 560). This makes the instrument family suitable for almost all refrigeration systems, and replaces the complicated mechanical manifolds.

Among the most important characteristics are the recording and documentation of the values measured on site. They can be directly stored in the instrument and later transferred to a PC. Online measurement on site via a PC is also possible.

## Newly developed software "EasyKool"

The newly developed software "EasyKool" offers professional data administration on a PC, and thus optimum refrigerant management. Measurement values can be shown graphically as well as in tabular form. If all actions are recorded during commissioning, a commissioning report can be drawn up. Uninterrupted documentation of data over a defined period of time allows the causes of malfunctions to be objectively diagnosed.

### Learning changes you

Testo's product lines provide flexibility during applications in the pressure and refrigeration sector, helping you to optimize your daily work. Do not hesitate to contact us with your queries. Communication between qualified experts and practitioners is invaluable for the advancement of measurement technology in this sector.

## Linde Kältetechnik GmbH & Co. KG relies on Testo

Mr. Waldvogel, Customer Service Technician, Linde Kältetechnik GmbH & Co. KG

Linde is one of the leading manufacturers of refrigerated and non-refrigerated units for the food sector. Their specialists use modern testo 560 electronic manifolds to record, regulate and measure.

What are the arguments in favour of using Testo's electronic manifolds?

As a manufacturer of top quality measuring instruments for this sector, I am sure you are not hearing for the first time that there were major problems in the past. The multitude of refrigerants required several mechanical measuring instruments with all kinds of gadgets in order to be able to take any kind of usable reading. Our technicians are now delighted with Testo's manifolds. More than 35 refrigerants available and complex conversions have been dispensed with or in other words: This is exactly how we imagined innovations which can be put to practical use – Testo is certainly living up to its reputation as an innovative manufacturer.

What exactly fascinates your specialists?

It's simple really; accurate values and convenient handling such as we have never seen before. Electronic manifolds with high and low pressure, vacuum and temperature socket are tool and measuring instrument in one. Highest efficiency is thus ensured resulting in a significant increase in cost effectiveness during maintenance work.

Once Testo, always Testo?

OK, so we don't want to exaggerate; there are other manufacturers out there who launch excellent products on the market but there is one thing we have certainly established: What Testo has developed with the electronic manifold for refrigeration and pressure technicians is not only unique but has also certainly drawn our attention to the company. We are looking forward to the newest ideas from Testo's innovation factory.

# The right instrument for

## testo 560 and 556

The new refrigeration system analyzers are the professional solution for service and maintenance. 2 temperature-compensated pressure sensors calculate in real time superheating and subcooling in a refrigeration system or heat pump using a probe which is attached externally. Using a high-quality sensor to measure vacuum, testo 560 is also ideal for system evacuations. This means commissioning can also be carried out.

"EasyKool" PC software offers you convenient data management on your PC: data overviews of all measurements, readings in table and graph form as well as optimum refrigerant management. On account of non-stop data documentation over a defined time period, the causes of downtimes can be diagnosed.

Additional accessories make the refrigeration technician's work easier.

Using the attachable electronic scales it is ensured that the amount of refrigerant filled corresponds to the amount actually required. The attachable switchable current probe (0 to 20 A / 200 A) monitors the compressor's power consumption. The oil pressure probe measures oil pressure in the compressor. The service life of the compressor is extended considerably if the oil level is kept at a sufficiently high level.

## The professional solution for commissioning, service and maintenance

### testo 560

- On site printout with Testo report printer (optional)
- High-quality sensors measure high/low pressure and temperature
- Calculation of superheating and subcooling in real time
- 4-way valve block with sight glass
- 4 temperature connections (2x cable, 2x wireless)
- Wireless temperature measurement up to 20 m (without obstruction)
- 30 refrigerants are stored in the instrument, more can be downloaded free of charge from the Testo websire with software "EasyKool".
- 60,000 measurement values can be stored
- Further functions:
  - Current measurement
  - Differential pressure measurement
  - Refrigerant stock management when filling or evacuating refrigeration systems
- Vacuum sensor/evacuation
- The sensor measures the absolute pressure and displays the corresponding evaporation temperature of water
- The vacuum sensor is protected from high pressures by a special valve

## The Professional Solution for Service and Maintenance

### testo 556

- On-site printout with Testo printer (optional)
- High-quality sensors measure high/low pressure and temperature
- Calculation of superheating and subcooling in real time
- 4-way valve block with sight glass
- 4 temperature probe connections (2x connected by wire, 2x radio)
- Wireless temperature measurement up to 20 m distance (without obstruction)
- 30 refrigerants are stored in the instrument, more refrigerants can be downloaded free of charge from the Testo website using the software "EasyKool"
- 60,000 measurement values can be stored
- Further functions:
  - Current measurement
  - Differential pressure measurement
  - Stock management of refrigerants when filling and evacuating refrigeration systems

# Leakage Detector for Refrigerants

## testo 316-4

**testo 316-4 Set 1 the fast and reliable leakage detector for all common refrigerants**

**testo 316-4 Set 2 specially for ammonia.**

The sensor is permanently monitored and shows malfunctions or contamination in the display. The use of test leaks is thus no longer necessary. If dirty, the sensor can be easily cleaned and is immediately ready for use again.

When leaks are detected, the display changes from green to red. An audible signal additionally informs of leakages detected. Using the earplug, the testo 316 can also be used in loud surroundings. The maximum indicator function shows maximum leakages and so facilitates the identification of leakage lo-

cations. The flexible gooseneck allows the optimum positioning of the sensor close to the piping or the leakage location.

A simple change of sensor by the user turns the 316-4 into an ammonia detector.

- Very long sensor life
- Optical and audible alarm
- Permanent sensor check
- Easy sensor change by the user
- Earplug socket for secure localization of leakages in loud surroundings

## Multi-purpose measuring instruments for analysing refrigeration systems

### testo 435

The testo 435 provides the possibility of analysing indoor air. This serves on the one hand as an indicator of the well-being of people at their workplace, and on the other hand as an important deciding factor in storage and production processes. Indoor air quality furthermore signalizes whether the indoor air system (VAC) is being used with optimum energy economy, or whether it needs to be adjusted with the help of testo 435. In addition to classical probes with a wire, wire-less measurement up to a distance of 20 m (without obstruction) is possible. Damage to the wire or hindrances in usage are thus eliminated. A maximum of three radio probes can be recorded and displayed by testo 435. The radio probes are available for the measurement parameters temperature and, depending on the instrument type, humidity. The optional, easily attachable radio module can be retrofitted at any time.

#### More user comfort

The testo 435 excels through its logical use and easy-to-follow menu. For measurements at different locations, testo 435-2 has the advantage that the readings are allocated to the respective measurement location. For duct and IAQ measurement applications, the instruments can be switched over between user profiles.

#### Absolutely robust instrument concept

The reliability of measuring instruments is a deciding factor. The testo 435 is a robust and reliable measuring instrument with protection class IP 54. The material used works as a built-in pro-

tection against knocks and dirt. The large backlit display is positioned slightly set back in the housing and is thus better protected. The carrying strap on the instrument enables safe transport. Magnets on the back of the instrument ensure secure attachment at the measurement location.

#### Common advantages

- Wide range of probes:
  - Thermal probes with integrated temperature and air humidity measurement
  - Vane and hot wire probes
  - Radio probes for temperature
- Easy use with user profiles
- Printout on Testo printer

#### Further advantages testo 435-2

- Instrument store for 10,000 readings
- PC software for analysing, archiving and documenting measurement data
- Moisture probes with radio or wire
- Possibility of connecting Lux probe
- Possibility of connecting comfort level probe

## Measures air velocity with telescopic vane

### testo 416

The compact testo 416 anemometer with permanently attached vane probe with telescopic handle (max. 890mm).

Volume flow is shown directly in the display. Accurate volume flow calculation due to easy input of duct area.

Timed and multi-point mean calculation provide information on mean volume flow.

Min/max values can also be shown in the display. The Hold function enables you to freeze the current reading in the display.

- Direct display of volume flow
- Multi-point or timed mean calculation
- Display light
- TopSafe, the indestructible protective case (optional)

## Measure air flow, volume flow and temperature, with a thermal anemometer

### testo 405

testo 405 is a thermal anemometer. It allows the measurement of air flow velocity, volume flow and temperature. testo 405 is ideal for measuring the flow in ducts or at duct openings or draughty windows.

- Duct holder and holding clip for fast positioning

- m/s and m³/h (volume flow calculation 0 to 99,990 m³/h)
- Measures in ducts and at duct openings

## Thermohygrometer, professional and safe

The right probe for every application: relative humidity, compensation humidity, pressure dewpoint, surface temperature

Probe head on radio handle (optional) for wireless data transmission

PC software for archiving and documenting measurement data (included in delivery) testo 635-2

Measurement data printout on site on Testo printer

## testo 635

The testo 635 offers the possibility of monitoring and analysing air humidity, material moisture (basis: compensation moisture), and the pressure dewpoint in pressured air systems. The prerequisite for professional moisture measurement is a reliable and precise moisture sensor. The worldwide patented Testo humidity sensor guarantees accurate and long-term stable measurement results.

### Versatility through radio probes

In addition to classical probes with a wire, wireless measurement up to 20 m (without obstruction) is possible. Damage to the wire or hindrance in usage are thus eliminated. A maximum of three radio probes can be recorded and displayed with testo 635. The radio probes are available for the measurement parameters temperature and moisture. The optional, easily attachable radio module is retrofittable at any time.

### Designed for ease of use

The testo 635 excels through its logical use and easy-to-follow menus. For measurements at different locations, testo 635-2 has the advantage that the readings are allocated to the respective measurement location. Selectable user profiles, i.e. programming of the function buttons and menu adapted to the application, allow intuitive operation.

### testo 635-2 with store and software

testo 635-2 has a memory for 10,000 readings. With testo 635-2, characteristic curves for different materials can be stored using the PC software included in delivery, and transmitted to the instrument. Moisture courses can be recorded, analysed and displayed as a graph or table.

### Common advantages

- Connection of three radio probes
- Measurement of air humidity, material compensation moisture and pressure dewpoint
- Display of dewpoint, min., max. and mean values
- Backlit display

### Additional advantages 635-1

- Cyclic printing of the readings on testo printer, e.g. once per minute

### Additional advantages 635-2

- Instrument store for 10,000 readings
- PC software for archiving and documenting measurement data
- Direct display of material moisture thanks to freely storable characteristic curves (Basis: material compensation moisture)
- Storage of single measurements or measurement series by location
- Fast access to the most important functions via user profiles

## Checks ambient conditions – Flexible and robust

### testo 625

The compact instrument with built-in humidity probe head for measuring air moisture and temperature. The large 2 line display shows humidity, wet bulb temperature or dewpoint as well as temperature.

When measuring at hard-to-access points, the humidity probe head can be easily removed and attached to the handle via the probe cable (accessory).

Alternatively, the readings can be transmitted wirelessly over wide distances from the probe to the measuring instrument. To do this, the humidity probe head is attached

to the radio handle (accessory) and the radio module (accessory) is added to testo 625.

- Displays temperature and relative humidity / wet bulb temperature / dewpoint
- Max./min. values
- Hold button to freeze readings
- Display light
- Auto Off function
- Patented humidity sensor
- 2 year guaranteed long-term stability
- TopSafe, instrument protection against dirt and knocks (optional)

## Highly precise alarm and logger thermometer - with measurement location management

### testo 735

#### Measuring several temperatures simultaneously

testo 735 – the highly versatile multi-channel measuring instrument. Fully equipped, up to 6 temperature probes can be recorded and displayed: Three radio probes and three attachable probes. For classical probes with wire, two inputs for fast thermoelement probes (Type K/T/J/S) and one input for highly precise Pt100 probes are available. The highly precise immersion/penetration probe reaches an accuracy of up to 0.05 °C via the Pt100 probe input. The resolution of the probe is 0.001 °C.

Wireless measurement with radio probes for air, immersion and penetration measurement

#### Versatility through radio probes

Readings can be transmitted to the testo 735 over a distance of up to 20 m (without obstruction) by radio. This takes place using the optional radio module and the corresponding probes. Damage to the wire or hindrances in usage are thus eliminated.

### Common advantages

- Connection of 3 attachable probes and three radio probes
- Data printout on the testo printer
- Audible alarm when limit values are exceeded
- System accuracy up to 0.05 °C
- Display of Delta T, min., max. and mean values
- Backlit display
- Protection class IP 65

- Instrument store for 10,000 readings
- PC software for archiving and documenting measurement data
- Measurement values can be shown in the display and simultaneously transferred to a PC and stored
- Storage of single measurements or measurement series by measurement location
- Quick access to the most important functions via user profiles
- Adjustment software for convenient calibration data management

### Further advantages testo 735-1

- Cyclical printing of readings on testo printer, e.g. once a minute

### Further advantages testo 735-2

## Fast Temperature Measurement with Wide Measurement Range

### testo 925

#### Single channel thermometer

The one channel temperature measuring instrument for connection to reliable, fast-action thermocouple probes. An additional temperature probe can be displayed in testo 925; data is transmitted by radio, i.e. wirelessly. An audible alarm sounds if limit values are exceeded. Current measurement data as well as max/min data can be printed on site on the Testo fast printer.

#### Advantages testo 925

- 1 channel measuring instrument with optional radio probe
- An audible alarm sounds when limit values are exceeded

#### Common advantages testo 925, testo 922

- On site printout on Testo fast printer
- Continuous display of max/min values
- Hold button to freeze reading
- TopSafe, indestructible case, protects from dirt and impact (option)
- Display light

#### testo 925

testo 925, 1 channel temperature measuring instrument T/C Type K, audible alarm, connection of an optional radio probe, with battery and calibration protocol

**Part no. 0560 9250**

### testo 922

#### Differential thermometer

The differential thermometer records temperature values from 2 connected thermocouple probes and displays them simultaneously. The reading from an additional temperature probe can also be wirelessly displayed in the testo 922 measuring instrument; i.e. measurement data is transmitted by radio.

Differential temperature can be called up immediately. Current measurement data such as max/min data can be printed on the Testo fast printer on site. It is possible to print measurement data once a minute, for example, on the printer if cyclical printing is in operation.

#### Advantages testo 922

- 2 channel measuring instrument with optional radio probe
- Displays differential temperature
- Cyclical printing of readings, e.g. once a minute

#### testo 922

testo 922, 2 channel temperature measuring instrument T/C Type K, connection of an optional radio probe, with battery and calibration protocol

## Temperature monitoring – Highly accurate

### testo 110

The highly accurate, versatile testo 110 temperature measuring instrument is ideal for the refrigeration sector on account of its optional TopSafe protection case. The engineering used is specially designed for applications in refrigerated store rooms and cabinets and for outdoors.

In addition to the wide range of conventional probes available with cable, a wireless radio probe can be used simultaneously (if radio module is used in instrument).

- Wireless measurement with radio probes possible (optional)
- Audible alarm (adjustable alarm limits)
- Displays max/min readings in 2 line, backlit display

Measurement data printout on site on Testo fast printer (optional)

Inspects a refrigerated counter for sufficient refrigeration power

TopSafe, the indestructible protective case (optional)

Monitors temperature in a freezing compartment using a wireless probe

## Non-contact temperature measurement on large surfaces (10:1 optics)

### testo 830-T1

The fast infrared thermometer with 1-point laser sighting. The 10:1 optics are ideal for temperature measurements on large surfaces

- 10:1 optics
- Display of current value and Hold value
- Emissivity adjustable from 0.2 to 1.0
- Audible and optical alarm when limit values are exceeded
- Fast measurement value recording at two measurements per second

#### testo 830-T1

Infrared thermometer with 1 point laser sighting, adjustable limit values and alarm function, incl. batteries

Part no. 0560 8301

### testo 830-T4

The versatile infrared thermometer with 30:1 optics allows temperature measurement at a safe distance from the measurement object. The diameter of the measurement point at a distance of 1 m is only 3.6 mm. The 2-point laser sighting avoids the measurement of undesired areas outside the measurement object.

Additional benefits:

- 30:1 optics for measuring temperature at a distance, even on small objects
- 2-point laser for spot sighting

## testo 845 – the infrared measurement technology for temperature with integrated humidity module

The testo 845 is a milestone in non-contact temperature measurement. For the first time, surface temperatures with smallest diameters can be measured accurately at short and long distances. The switchable optics for far-field and close focus measurement make this possible.

testo 845 is equipped with an optical resolution of 75:1 for far-field measurements. Surface temperatures can be measured accurately even at great distances from the object to be measured. At a distance of 1.2 metres from the object to be measured, the measuring spot diameter is only 16 mm. A cross laser marks the measuring spot exactly during measurement. Incorrect measurements are eliminated - you always know exactly where you are measuring.

The close focus optics allow the measurement of temperatures on the smallest surfaces with a diameter of just 1 mm and a distance of 70 mm! Two lasers mark the measuring spot exactly.

- Switchable optics for far-field measurements (75:1) and close focus (1 mm, 70 mm distance)
- Especially bright cross laser sighting for indicating the actual measuring point
- Reference accuracy  $\pm 0.75\text{ }^{\circ}\text{C}$  with super-fast measurement technology (scanning 100 ms)
- Backlit display (3-line), shows  $^{\circ}\text{C}$ , min./max. values, alarm limit values and emissivity; in addition display with humidity module: %RH,  $^{\circ}\text{Ctd}$
- Optical and audible alarm when limit values are exceeded
- Instrument memory for 90 measurement protocols
- PC software for archiving and documenting measurement data (included in delivery)
- Tripod fitting for online measurement via USB cable (included in delivery)

## Flexible fiberscope for fast diagnoses

### testo 319

The testo 319 fibre-glass fiberscope facilitates easy inspections at difficult-to-access points such as in air ducts, ventilators, machines and motors etc. Diagnoses such as corrosion, friction wear, condition of welding joints, loose parts and lots more can be made very early, very quickly and very easily using endoscopy.

The flexible testo 319 can be guided through hollow spaces, bore holes and bends. You can adjust the focus using the focussing wheel. In this way the damaged point can be appraised without the need for dismantling.

- Optics: 6,000 pixels with a field of view of 50°
- Low bending radius (50 mm), small diameter (6 mm)
- Stability thanks to Decabon pipe
- Gooseneck casing for medium flexibility
- 3-arm gripper: Grips small objects (optional)

## Sound level measuring instrument

### testo 815

The ideal instrument for daily use. Whether it is for air conditioning or heating, disco noise, machine noise or noise in combustion systems, testo 815 is the ideal partner.

#### Common features:

- Frequency weighting according to characteristic A and C
- Maximum and minimum value memory
- Built-in tripod knuckle screw (1/4 inch)
- Switchable time weighting Fast / Slow

#### testo 815

## Rpm measurement

### testo 465

#### Non-contact

Using testo 465, rpm can be easily measured without contact. Simply attach a reflector to the object to be measured and then point the visible red light beam at the reflector and measure.

- Stores mean/min/max value, last reading
- Robust design on account of SoftCase (protection sleeve)

Temperature fluctuations which cause damage are documented on the testo 575 fast printer or analysed on your PC via interface.

### testo 177-T2

testo 177-T2, the professional data logger with display. It provides you with a quick overview of the current reading, the last value saved, max and min values and the number of times the limits were exceeded.

All of the values collected by the testo 580 data collector during long-term monitoring over months/years can be sent to your notebook/PC. Convenient analysis possible using software based on Windows®.

- Logs temperatures with up to 48,000 readings
- Specially for use in low temperatures (up to -40 °C)
- On-site: Fast documentation on the infrared printer, 6 lines/s
- Collect data on-site with testo 580 and download to your PC for analysis

testo 177-T1 without display, data is printed on site on the fast testo 575 printer

Collects data on site which is uploaded to your PC for analysis

Long-term temperature logging with immediate display of limits exceeded e.g. during transport, in refrigerated rooms, warehouses etc.

## The data logger with 2 probe sockets and event logging

### testo 177-T3

testo 177-T3 documents 3 temperatures and an event simultaneously providing proof of an uninterrupted cooling chain during transport.

For example, complete monitoring of ambient air, intake and outgoing temperature with simultaneous monitoring of the door is possible when monitoring refrigerated store rooms. The measuring rate of the event can be set completely independently of the measuring rate of the temperature channels.

- Temperature logging of up to 48000 readings
- Data is read out without interrupting the measurement series
- Data analysis as table or graph, with Email function

## testo 177-T4

The testo 177-T4 professional data logger with up to 4 external temperature probe connections for simultaneous temperature measurement at different sites.

Using testo 177-T4, refrigeration/freezer storage rooms can be monitored non-stop and the data saved on PC.

- Specially for use in high and low temperatures
- Read out data without interrupting the measurement series
- Data analysis in table or graphics form, with email function
- Memory for up to 48,000 readings

## Monitor refrigerated rooms, efficiently and reliably

### testo 175-H1

The affordable humidity/temperature logger testo 175-H1, without display, monitors fluctuations in storage humidity and temperature efficiently and unobtrusively.

Limit values can be entered, an alarm display is activated if the limits are exceeded. testo 575, the fast printer, supplies proof of fluctuations in ambient conditions.

### testo 175-H2

The compact humidity/temperature logger with display. It provides you with a fast on-site overview of current readings, the last values saved, max and min values and the number of times limits were exceeded.

The testo 575 fast printer provides proof that specified ambient storage conditions or production conditions have been adhered to. All of the values logged by the testo 580 data collector can then be uploaded to your PC for analysis.

- Humidity sensor guaranteed long-term stable
- Memory for up to 3700 readings (testo 175-H1)
- Memory for up to 16000 readings (testo 175-H2)
- Data safe even when battery is spent
- Fast documentation on infrared printer, 6 lines/s
- Data transfer to PC or Notebook via interface or testo 580 data collector
- Large display (testo 175-H2)

# Long-term refrigeration storage monitoring, professional and non-stop

## testo 177-H1

Sensitive products require the right ambient conditions in refrigerated rooms. Efficient measurement and documentation of the readings over months/years is possible using the testo 177-H1 professional data logger.

Additional surface, immersion and air probes can be attached to the data logger.

- Long-term stable humidity sensor with fast response time
- Memory for up to 48,000 readings

- Control and adjustment option with adjustment set
- Protective caps for dirt-ingressed air or corrosive gases

## Accessories for testo 175 and 177

### testo 575 fast printer

- Fast-action print mechanism, 6 lines/s
- Prints tables/graphics
- Brief info. or full memory can be printed as required
- Determine section to be printed
- Your language can be set
- Self-adhesive Testo paper can also be used

Fast printout and logger rebooting with testo 575

Part no. 0554 1775

Alarm signal output for reliable notification of limits exceeded

Read out the data stored in the logger via the PC network using the Ethernet adapter

### testo 580 data collector

- Can read out up to 25 full testo 175 loggers or 10 full testo 177 loggers
- Displays all status information
- Download collected data to PC using Testo ComSoft 3

The testo 580 data collects data on site for upload to PC and analysis

### testostor 171-1

You can place the testostor 171-1 data logger beside the goods, for example, and attach the external probe to doors or refrigeration appliances located up to 12m away. Air moisture can also be monitored, if required.

- Logs up to 55000 readings
- Probe can be positioned quickly and easily
- Tamperproof measurement results
- On site application: Testo Software for Palm OS® replaces laptop/PC

### testostor 171-4

testostor 171-4 with up to 4 external temperature probe sockets is used for simultaneous temperature measurement at different locations.

**Int.: °C + Ext.: °C or %RH/°C**

Temperature data logger with °C/%RH probe socket, incl. magnetic start function, battery, calibration protocol (please order calibration certificates (DKD,350) separately)

**Part no. 0577 1715**

#### testostor 171-4

**4 x external °C**

Temperature data logger, 4 channels, with magnetic start function, battery and calibration protocol (please order calibration certificates (DKD,350) separately)

**Part no. 0577 1714**

Head of Testo  
Academy

... because they know what they are doing. We offer you our support with our field-oriented trainings on measurement procedures and physical interrelations.

Even more important is the exchange with other specialists from your field. After all, we are dealing with your competence and your professional routine when using our instrument.

By the way: 98% of our training participants fully recommend our seminars and training.

Connection option for up to 4 ambient air probes per logger

Comprehensive range of probes for temperature, humidity, pressure, velocity, CO<sub>2</sub>, rpm, current and voltage

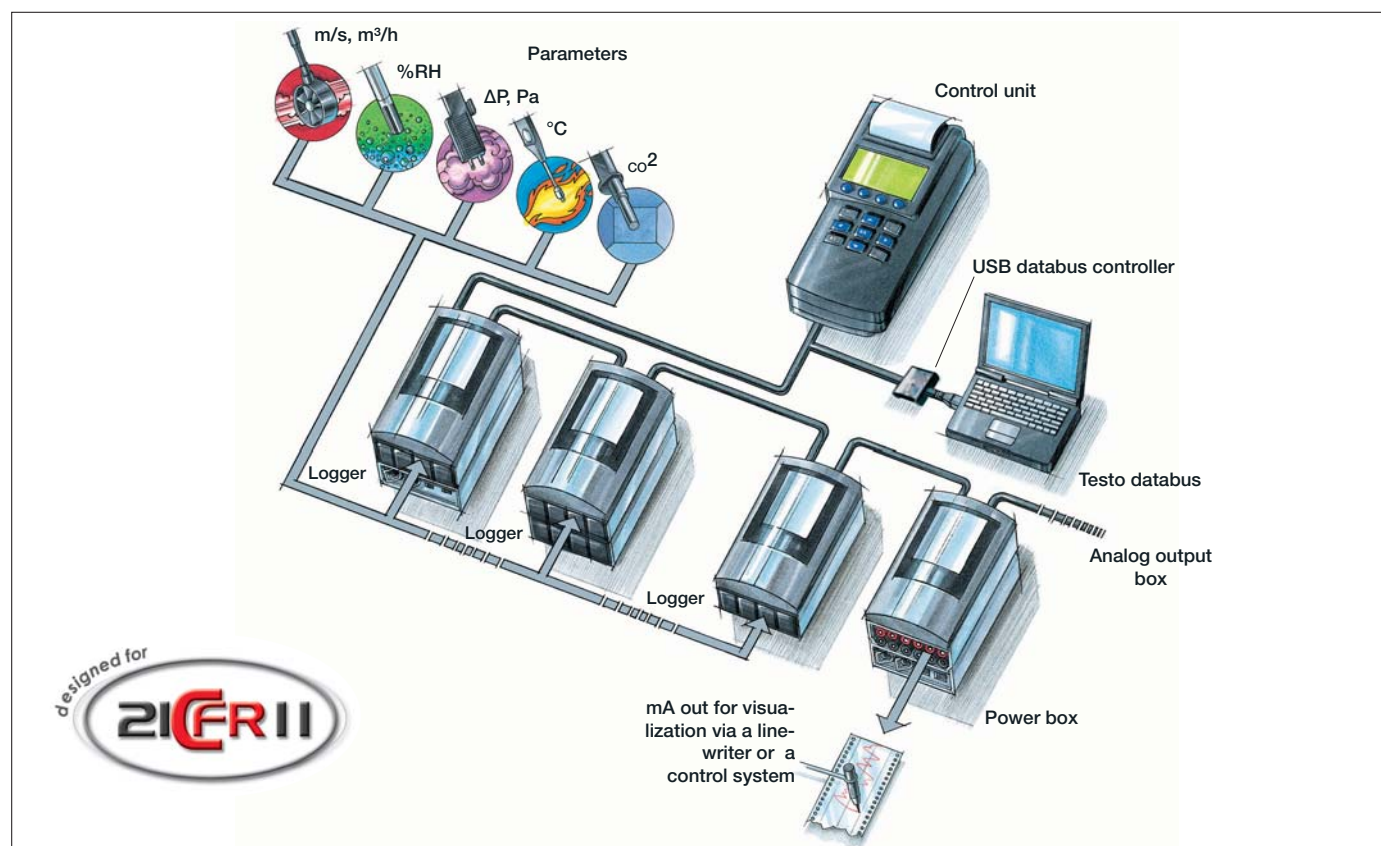

Analysis, documentation and filing of measurement data on PC

Large system case (aluminium) for control unit, up to 6 loggers, probes and accessories

## testo 454, simultaneous measurement at different sites

### Concept

The **testo 454** is the measuring system for flexible recording of multiple measurement data.

Particular advantages:

- Simultaneous measurement at several measuring locations
- Freely assignable probe inputs
- 1 to over 200 measurement channels
- Data transmission with the Testo databus
- Modular design of system components

### Parameters

A wide range of probes is available for accurate measurement in the respective applications:

- Temperature with surface, immersion, penetration, air or precision probes
- Humidity with room climate, duct and precision probes, material moisture probes and pressure dewpoint probes
- Velocity and volume flow with vanes, hot wire, hot bulb probes and Pitot tubes
- Indoor Air Quality using CO<sub>2</sub> probe or comfort level probe
- Pressure with differential/absolute/low pressure or high pressure probes
- rpm
- Current, voltage

### Logger

The data logger measures and saves readings without any connection to the control unit. Up to 4 more probes of your choice can be connected to this logger. Additional probe connection options are made possible by connecting more loggers. The following features give you flexibility when measuring data:

- Variable program start
- Adjustable measuring cycle
- Number of readings
- Program cancel can be defined

The measurement program can be started as follows:

- At a certain time or date
- Manually using function buttons
- If certain values are exceeded or undershot
- Via an event trigger socket signal

The exceeded alarm values can be evaluated for display or control via a relay.

### Control unit

The control unit displays the measurement data and controls the **testo 454** measuring system. The following parameters are programmed in the control unit:

- Locations
- Measurement programs
- Limits
- Precision adjustment
- System configuration

Efficient operation of the measuring system is guaranteed by the probe-dependent menu guide, for example, or the clear display of readings with names. The control unit is connected via the serial interface in the laptop/PC.

Additionally the control unit has all options for mobile use of a hand-held instrument.

### Testo databus controller

Alternatively, the Testo databus controller for the laptop/PC can be used in place of the control unit for reading out and control of the decentralised loggers. The Testo databus controller is connected via the USB interface of the PC/laptop.

Online measurement allows the readings from multiple loggers to be displayed easily and clearly on one screen. System-relevant data and readings are stored in the laptop/PC and in the loggers.

### Testo databus

Communication between control unit/logger, Testo databus controller/logger and other boxes takes place via the Testo databus. Using the Testo databus, you have the option of operating loggers at different locations. Distances of up to several hundred metres pose no problem for the Testo databus. In combination with the Testo databus controller and the software ComSoft 3, the testo 454 data loggers can be validated for requirements according to 21 CFR Part 11.

### Analog output box

The logger readings are output as a current signal (4-20 mA signal) for display units or output on an analog recorder.

### Power box

The power box is used to supply power to the loggers, control unit, analog output box and the Testo databus thus increasing operating life in the field.

## Professional analysis of refrigeration systems

### testo 454

The testo 454 multi-function measuring instrument is ideal for use on large refrigeration systems. By combining several data loggers, many parameters in a refrigeration system can be measured simultaneously (e.g. in a cold water substitute: superheating/subcooling + water's input and output temperature + high pressure + low pressure).

#### Concept

testo 454 is the system for flexible measurement of different measurement data.

Main features:

- Simultaneous measurement at several measurement points
- User defined probe sockets
- 1 to more than 200 measurement channels
- Data transmission with the Testo data bus
- Modular layout of system components

Testo databus controller to read and control loggers via laptop/PC

Measure superheating/subcooling and the oil pressure in an industrial refrigeration system

## Pressure meters for all measurement ranges

### testo 521

Highly accurate with internal differential pressure sensor, ideal for inspecting extraction units and ventilators and for monitoring pressure drops in filters.

The instrument also has two probe sockets to connect external temperature probes or pressure probes, for example, for simultaneous monitoring of condensation and evaporation pressure.

- Temp. compensated differential pressure sensor 0 to 100 hPa integrated in instrument
- 2 probe sockets for pressure and temperature
- Long-term analysis with internal data memory
- Printout on-site

Save data according to site and analyse on PC/notebook

Monitors filters using the external 100 Pa probe
